

Applets... Retail Mobile (for Water Cooler Systems)

The Mobile Retail Application can be adapted to be used for a number of mobile retail situations. This version has been tailored to suit a water cooler replenishment and service environment.

A Stock list and Customer list is imported into the hand held terminal's database. The stock list can be viewed together with the cost code and the retail cost. A customer is selected and confirmed. Items are added to the sale list with price and Quantity. On completion a signature can be sought and the delivery made.

The data can be uploaded to the main PC and Invoices etc can then be generated.

The application can be expanded for different types of requirements. The data transferred to the PC is downloaded into a pre-determined file created when creating the application.

The data collected will be appended to the existing data within the table within workgroups it can be deleted or backed up into archive.

The Application Prompt For:
User, Customer, Item, Cost, Quantity, Signature
