

Applets..... Trailer Manifest

The Trailer Manifest application is designed to allow companies that load and unload trailers to be able to load known carriers into a hand held terminal and be able to process the items and send the collected data back to an Excel Spread Sheet on the PC to be interrogated by company admin.

Loading and Unloading Trailers

This simple application needs an uploading facility, so that you can load any new users or any new carriers.

The terminal can now be connected to the PC and the data transferred to the PC in the pre determined file created when creating the application.

The data collected will be appended to the existing data within the table within workgroups it can be deleted or backed up into an archive.

The Application Prompt For:

- **Carrier**
- **Item Barcode**
- **Quantity**
